

Industrial Internship Report on "Digital Marketing Strategy & Execution for a Consumer Brand"

Prepared by

Vikas Kumar

Executive Summary

This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt Ltd (UCT).

This internship was focused on a project/problem statement provided by UCT. We had to finish the project including the report in 6 weeks' time.

My project was to build an end-to-end digital marketing strategy across five key areas: Meta Ads audience targeting for an EdTech company, SEO fundamentals via Google algorithm updates, a social media launch strategy for a new smartwatch product, a competitor analysis for a payment gateway business, a content marketing strategy for an FMCG brand, and a crawlable e-commerce website structure.

This internship gave me a very good opportunity to get exposure to Industrial problems and design/implement solution for that. It was an overall great experience to have this internship.

1 Preface

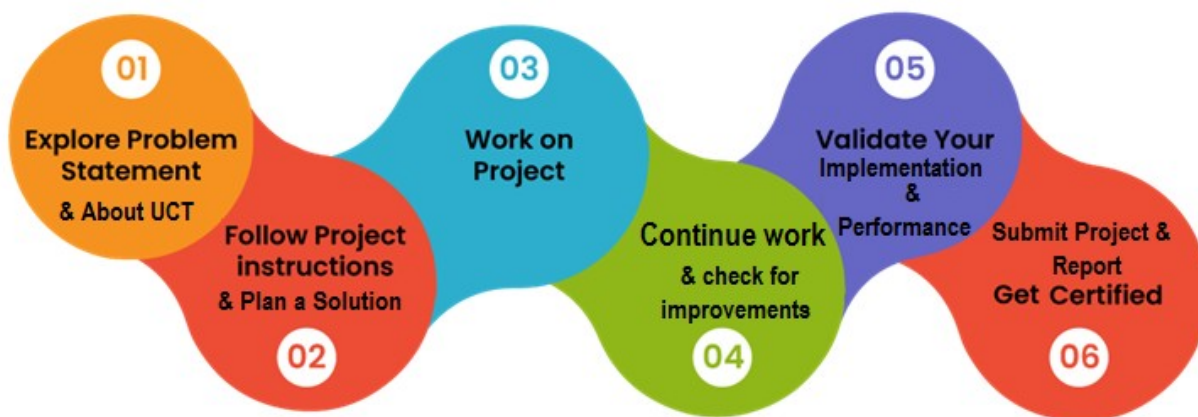

Summary of the whole 6 weeks' work: Over the course of this internship, I worked through the UpSkill Campus Digital Marketing curriculum, completing five hands-on projects that together covered paid advertising, SEO, social media strategy, competitive analysis, content marketing, and e-commerce site structure.

Digital marketing skills are increasingly essential for career development, as almost every business today depends on online visibility, targeted advertising, and content-driven customer engagement to grow.

My project/problem statement involved formulating and executing digital marketing strategies for hypothetical client scenarios - an EdTech company's Meta Ads targeting, an electronics brand's social media product launch, a payment gateway's competitive positioning, an FMCG company's content marketing, and an e-commerce brand's SEO-friendly site structure.

USC/UCT gave me the opportunity to learn digital marketing concepts in a structured, industry-relevant format and apply them directly to realistic business scenarios instead of purely theoretical study.

The program was planned week-by-week, with each week building on a new digital marketing concept (paid ads, SEO, social media, competitive analysis, content marketing, e-commerce) followed by a practical project and a knowledge-check assessment.

Your Learnings and overall experience: I learned how to translate marketing theory into practical deliverables — audience targeting, SEO strategy, social media campaigns, competitor benchmarking, content pillars, and site architecture — and improved my Week 4 assessment score from 70% to 100% through focused revision, which reflected a much stronger grasp of the concepts by the end of the internship.

Thank you to upskill Campus, The IoT Academy, and UniConverge Technologies Pvt Ltd for structuring this internship, and to my course mentors for their guidance throughout the six weeks.

Your message to your juniors and peers: Don't just complete the weekly projects for submission's sake - try applying each concept to a business or product you're genuinely curious about. That's what made the learning stick for me, and it's what turned quiz scores from 70% into 100%.

2 Introduction

2.1 About UniConverge Technologies Pvt Ltd

A company established in 2013 and working in Digital Transformation domain and providing Industrial solutions with prime focus on sustainability and Rol.

For developing its products and solutions it is leveraging various **Cutting Edge Technologies** e.g. **Internet of Things (IoT), Cyber Security, Cloud computing (AWS, Azure), Machine Learning, Communication Technologies (4G/5G/LoRaWAN), Java Full Stack, Python, Front end** etc.

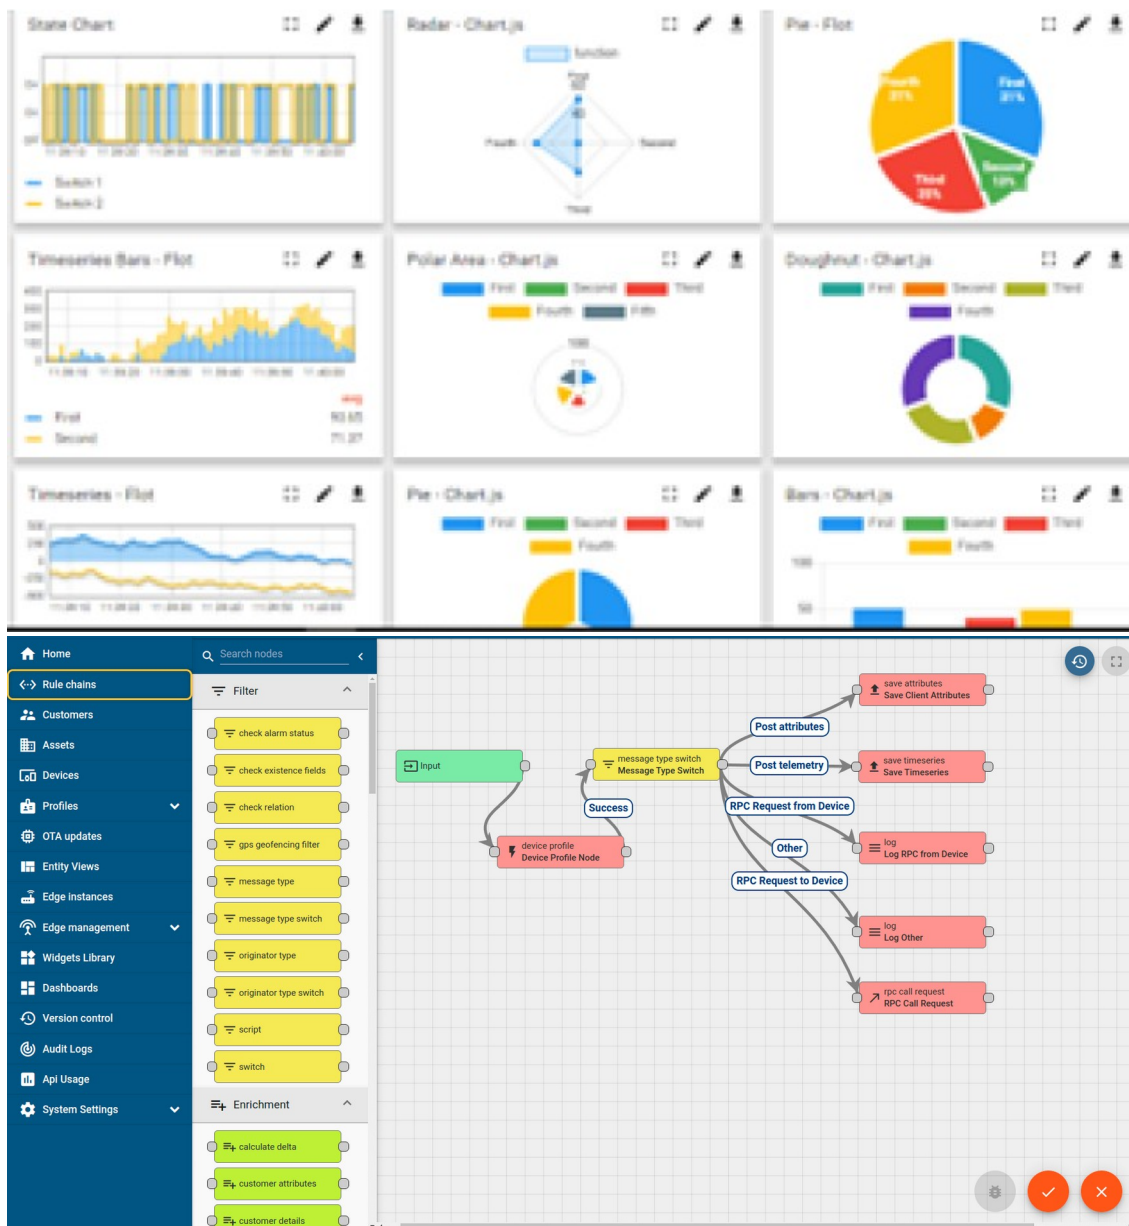

i. UCT IoT Platform ()

UCT Insight is an IOT platform designed for quick deployment of IOT applications on the same time providing valuable “insight” for your process/business. It has been built in Java for backend and ReactJS for Front end. It has support for MySQL and various NoSql Databases.

- It enables device connectivity via industry standard IoT protocols - MQTT, CoAP, HTTP, Modbus TCP, OPC UA
- It supports both cloud and on-premises deployments.

It has features to

- Build Your own dashboard
- Analytics and Reporting
- Alert and Notification
- Integration with third party application(Power BI, SAP, ERP)
- Rule Engine

FACTORY WATCH

ii. Smart Factory Platform ()

Factory watch is a platform for smart factory needs.

It provides Users/ Factory

- with a scalable solution for their Production and asset monitoring
- OEE and predictive maintenance solution scaling up to digital twin for your assets.
- to unleash the true potential of the data that their machines are generating and helps to identify the KPIs and also improve them.
- A modular architecture that allows users to choose the service that they want to start and then can scale to more complex solutions as per their demands.

Its unique SaaS model helps users to save time, cost and money.

Machine	Operator	Work Order ID	Job ID	Job Performance	Job Progress		Output		Rejection	Time (mins)				Job Status	End Customer
					Start Time	End Time	Planned	Actual		Setup	Pred	Downtime	Idle		
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i

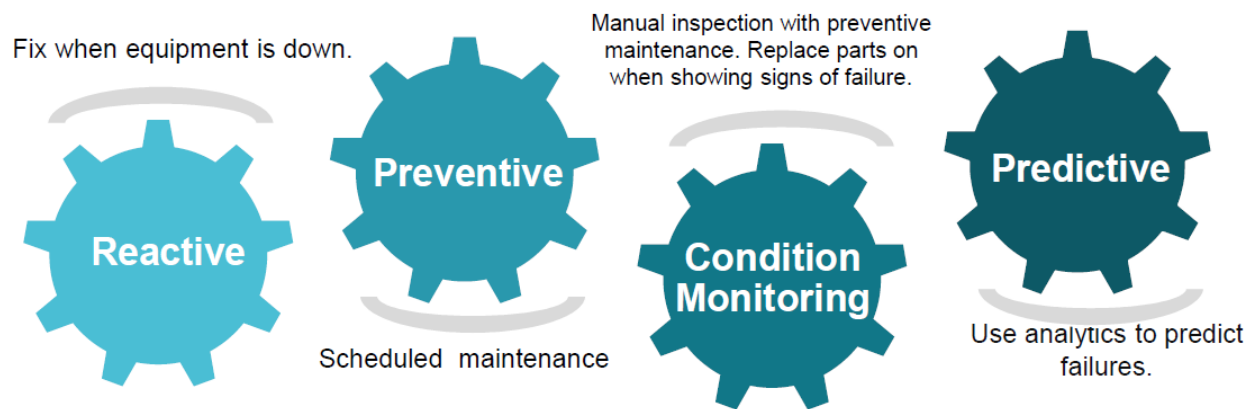

iii. LoRaWAN based Solution

UCT is one of the early adopters of LoRAWAN technology and providing solution in Agritech, Smart cities, Industrial Monitoring, Smart Street Light, Smart Water/ Gas/ Electricity metering solutions etc.

iv. Predictive Maintenance

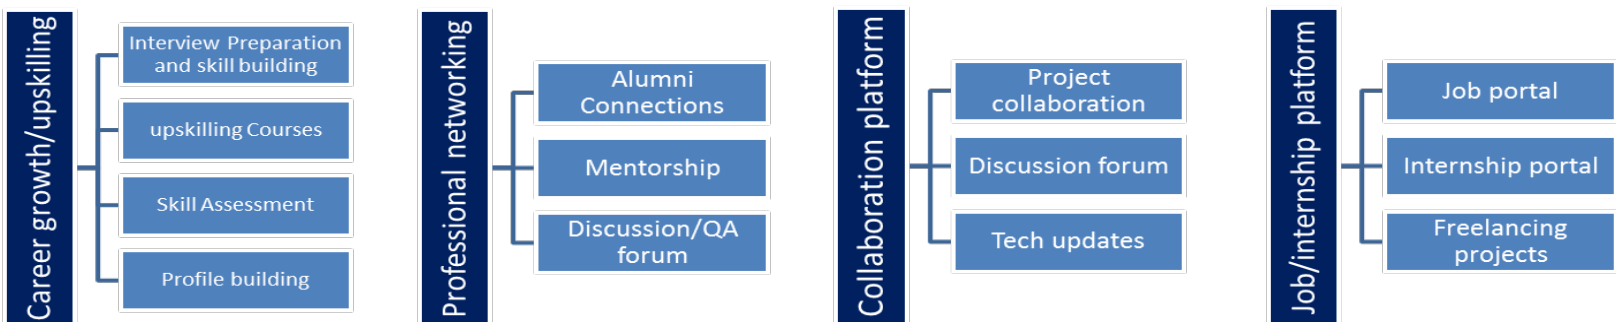

UCT is providing Industrial Machine health monitoring and Predictive maintenance solution leveraging Embedded system, Industrial IoT and Machine Learning Technologies by finding Remaining useful life time of various Machines used in production process.

2.2 About upskill Campus (USC)

upskill Campus along with The IoT Academy and in association with Uniconverge technologies has facilitated the smooth execution of the complete internship process.

USC is a career development platform that delivers **personalized executive coaching** in a more affordable, scalable and measurable way.

2.3 The IoT Academy

The IoT academy is EdTech Division of UCT that is running long executive certification programs in collaboration with EICT Academy, IITK, IITR and IITG in multiple domains.

2.4 Objectives of this Internship program

The objective for this internship program was to

- get practical experience of working in the industry.
- to solve real world problems.
- to have improved job prospects.
- to have Improved understanding of our field and its applications.
- to have Personal growth like better communication and problem solving.

3 Problem Statement

In the assigned problem statements across the five course projects, the common thread was businesses that lacked a structured digital presence strategy: an EdTech company needed precise Meta Ads audience targeting; a new smartwatch needed a social-first product launch plan; a payment gateway needed to benchmark itself against 5 established competitors; an FMCG brand needed a multi-format content marketing strategy; and an e-commerce brand needed a website structure that search engines could easily crawl and index. Each problem required applying a different digital marketing discipline to a realistic business constraint.

4 Existing and Proposed solution

Provide summary of existing solutions provided by others, what are their limitations? Existing approaches by competitors were often single-channel (e.g., relying only on paid ads or only on organic SEO) and rarely benchmarked systematically against multiple competitors. Many payment gateways and e-commerce sites also carried legacy UI/UX and deep navigation structures that hurt both user experience and crawlability.

What is your proposed solution? An integrated, multi-channel digital marketing approach for each scenario: precisely targeted Meta Ads audiences based on demographics and interests; a 3-platform (Instagram, YouTube, Facebook) social launch strategy with platform-specific creatives; a 5-gateway competitor benchmark with actionable improvement points; 5 distinct content pillars spanning text, image, and video; and a shallow, 2-click-deep e-commerce structure with a sitemap and internal linking for easy crawlability.

What value addition are you planning? Combining data-driven targeting with creative storytelling, and treating SEO/crawlability as a core design constraint rather than an afterthought - so campaigns don't just reach audiences, they're also structurally set up to be found and indexed effectively.

4.1 Code submission (Github link)

<https://github.com/diwakervikas31-droid/upskillcampus> (contains the weekly project files: VikasKumar_Week01.docx, VikasKumar_Week02.docx, VikasKumar_Week03.docx, and VikasKumar_Week04.docx, covering Meta Ads targeting, SEO, social media strategy, competitor analysis, content marketing, and e-commerce structure).

4.2 Report submission (Github link) : first make placeholder, copy the link.

https://github.com/diwakervikas31-droid/upskillcampus/blob/main/InternshipReport_VikasKumar_USC_UCT.pdf

4.3

5 Proposed Design/ Model

The design flow for each project followed a consistent pattern: start with audience/market research, move to strategy formulation (channel selection, content pillars, or competitor benchmarking), and end with a concrete, presentable output (ad targeting sheet, content calendar, competitor comparison table, or site structure flowchart).

5.1 High Level Diagram (if applicable)

The high-level structure below represents the e-commerce website design from Project 5: a homepage linking to 3 product categories (Electronics, Fashion, Home & Kitchen), each containing 5 products, with a sitemap and search bar providing additional crawl paths so search engine bots can reach every page within 2 clicks.

Figure 1: HIGH LEVEL DIAGRAM OF THE SYSTEM

5.2 Low Level Diagram (if applicable)

5.3 Interfaces (if applicable)

The site's internal linking follows a simple flow: Homepage → Category Page → Product Page, with breadcrumb navigation (Home > Category > Product) and a dedicated Sitemap page linking back to all categories and products, giving search engine crawlers a reliable, low-depth path through the entire site.

6 Performance Test

This is very important part and defines why this work is meant for real marketing outcomes, instead of being just an academic exercise.

Here we need to first find the constraints - for digital marketing work, these are things like audience reach, engagement rate, click-through rate, page-crawl depth, and knowledge retention (assessment scores).

These constraints were addressed by matching platform choice to target audience behavior (e.g., Instagram/YouTube for a younger smartwatch audience), keeping site depth to a maximum of 2 clicks for crawlability, and revising concepts to close knowledge gaps after the first quiz attempt.

The e-commerce structure kept every product within 2 clicks of the homepage; the content strategy covered 5 distinct pillars across 3 formats (text, image, video); and the Week 4 knowledge assessment score improved from 70% (first attempt) to 100% (second attempt).

Constraints in digital marketing can be e.g. platform algorithm limitations, ad budget caps, audience saturation, crawl-budget limits, and time available for content production.

Where live testing wasn't possible (e.g., real ad spend or live crawler audits), recommendations were still documented - such as monitoring click-through rate post-launch and running a crawler simulation tool (e.g., Screaming Frog) before going live.

6.1 Test Plan/ Test Cases

Test cases included: checking that every product page is reachable within 2 clicks from the homepage; verifying each social media caption/theme matched its intended platform's tone; and re-attempting the Week 4 quiz after reviewing incorrect answers.

6.2 Test Procedure

Procedure: manually traced click-paths through the proposed site map; peer-reviewed captions/themes for platform fit; and completed a self-review of the Week 4 quiz questions before re-attempting.

6.3 Performance Outcome

Outcome: the site structure passed all click-depth checks, the content strategy was approved as distinct-yet-consistent across platforms, and the quiz score improved from 70% to 100% on the second attempt.

7 My learnings

This internship strengthened my practical understanding of digital marketing across paid advertising, SEO, social media, competitor analysis, content marketing, and technical SEO/site structure. Beyond the frameworks themselves, I learned how to translate a business problem into a channel-specific strategy and back it up with clear reasoning - a skill directly transferable to any marketing role. Improving my Week 4 assessment score from 70% to 100% also reinforced the value of reviewing mistakes rather than moving on from them, which I plan to carry into my future work.

8 Future work scope

Due to the 6-week time limitation, live implementation and real performance data (actual ad spend results, live crawler audits, real audience engagement) could not be gathered. Future work could involve actually running a small-budget Meta Ads campaign to validate the targeting strategy, using a tool like Google Search Console or Screaming Frog to audit the proposed e-commerce structure's real crawlability, and A/B testing the content pillars from Project 4 to see which themes drive the most engagement.
